LOFT SERIES BURNERS

Unconventional Styling, Contemporary Flair, Astonishing Good Looks

When a traditional fireplace would seem out of place, the Loft Series of contemporary burners complement the unique décor you worked so hard to achieve.

The Loft Series Burner installs in any certified vent-free firebox or wood-burning fireplace to help complete your artistic statement. It operates as a vent-free system for heating or can be installed in a vented fireplace to provide the ambiance of a fire but without the heat.

Available in LP and Natural Gas models in 18-inch (10,000 or 26,000 Btu), 24-inch (36,000 Btu), and 30-inch (40,000 Btu), there's a Loft Series Burner sized perfectly for your fireplace.

A unique 18-inch (10,000 Btu) Millivolt Loft burner provides heat and ambiance for bedroom fireplaces. Check your local codes for applicable restrictions.

Choose an on/off, remote-ready Millivolt system with a manual Piezo Ignition.

Or, opt for the Intermittent Pilot system with its thermostat remote control that varies flame height for up to 30-percent turndown. This unique system delivers just the right amount of heat to maintain a comfortable temperature. An override feature lets you operate the burner manually.

24-inch Loft Series Burner with Brushed Stainless Steel Decorative Top in an existing Fireplace.
(Panels are concrete countertop material)

Decorative Accessories Abound

24-inch Loft Series Burner

24-inch Loft Series Burner with Polished Black Decorative Top

24-inch Loft Series Burner with Stainless Steel Decorative Top

24-inch Loft Series Burner with Blue Clear Decorative Glass

24-inch Loft Series Burner with Medium Rocks and Accent Pebbles

24-inch Loft Series Burner with Polished Black Decorative Glass

Your Loft Series Burner arrives finished in lustrous matte black. Decorative accessory tops – available in polished black and brushed stainless steel – install in minutes to instantly change the look and character of your fireplace.

Empire also offers three styles of decorative glass to conceal the burner and create the illusion of flame floating above a reflective field. All of the glass starts as tempered panes that are shattered, screened for the proper particle size, and tumbled to minimize sharp edges.

The transparent Blue Clear glass captures and reflects the flickering light from the flames for a bright, airy feel.

The opaque Black Polished glass features mirror-polished surfaces to reflect light and create a little dark mystery in your fireplace.

And our Clear Frost glass has non-reflective white surfaces that warmly glow in the light from the flames.

Additional decorative glass colors and finishes are available from Empire and through your fireplace dealer. For safety in handling and heat resistance, use only decorative glass products designed for use in fireplace applications.

The Loft Series Burners are ideal when installed in Empire's Deluxe Vent-Free Fireboxes – available in three sizes (32-inch, 36-inch, and 42-inch) in Matte Black (Flush or Louvered) or Stainless Steel (Flush only). To complement the new Loft Series Burner, an optional polished black or stainless steel liner – exclusive to the Deluxe Firebox – creates the perfect setting.

SPECIALTY LOFT BURNERS

The 24-inch Multi-sided Loft Burner (36,000 Btu) is ideal for Peninsula and See-Through fireboxes. Like other Loft burners, the Multi-sided system can be tailored to your living space with decorative tops and glass. Optional liners, in brushed stainless steel and reflective black, fit Empire's 36-inch Peninsula and See-Through fireboxes.

“Excellence in Design” Annual Award

This unusual fireplace product has inspired an unusual award program: Once your Loft system is installed, submit a high-quality photograph to Empire showing the fireplace operating. We will post the best and most unusual installations on our web site.

Each January, we will select one installation as the best for the previous year and award the homeowner \$500 and an “Excellence in Design” plaque. The installing dealer will also receive a plaque.

Download the “Excellence in Design” award entry form at www.empirecomfort.com.

Your entry must include a high-quality photograph, the model and serial number of your Loft Series product, and your name, address, and daytime phone. All submitted installations must comply with the instructions in the owner’s manual and with applicable codes.

LOFT SERIES FIREPLACES

The unique Loft Series Fireplace includes a Loft burner in a compact system. This versatile unit installs as a zero-clearance vent-free fireplace or as an insert in an existing fireplace.

Rated at 20,000 Btu input for the VFL20 and 28,000 for the VFL28, the 99-percent efficient Loft Fireplace will quickly warm your living space - and grab your attention. A special 10,000 Btu model is also available for bedroom applications, where allowed by local codes.

Choose the Millivolt system and select one of seven control options - from a simple wall switch to a thermostat remote to the ultimate programmable remote. Or choose the Intermittent Pilot system, which includes a variable flame-height remote control with integral thermostat.

Finish your fireplace installation with one of Empire's two distinctive decorative fronts. The ultra-clean frameless tempered glass front features rounded and polished edges and a silk screened black border. With its minimally visible hardware, the glass pane "floats" in front of the fireplace.

For a more traditional look, choose the simple, elegant black metal frame with glass panel. This four-sided frame, with its 1 3/4-inch depth, provides the perfect transition to drywall, tile, or other material.

Installed as an insert, your Loft system will require the three-sided decorative surround. Like the four-sided frame, this surround measures 1 3/4-inch deep and makes a clean transition from an existing fireplace. To help conceal a large hearth opening, Empire also offers a 48 x 36-inch shroud, for use in conjunction with the decorative surround.

Loft Fireplace Accessories

The Loft Fireplace interior and burner top are finished in rich gloss black to reflect the flames and create unique looks from every viewing angle. Add decorative glass - in Black Polished, Blue Clear, or Clear Frost - to conceal the burner and instantly change the character of your fireplace.

Enhance the heat distribution of your Loft Fireplace with the optional blower. The quiet air circulation system features variable speed control and automatic operation.

Proven Vent-Free Technology

At 99.9 percent efficient, your vent-free Loft Series Burner makes a great supplemental heat source for your home. Every Loft burner includes a built-in Oxygen Depletion Sensor that continuously monitors room air and shuts off gas to the system well before oxygen drops to an unsafe level. Vent-free technology has an unmatched record of providing safe, reliable heating for more than 40 years.

Zone heating with a vent-free system allows you to efficiently heat the rooms you use most and turn down the thermostat on your central furnace. This saves energy and money - up to 30 percent in a typical installation.
